

BMI323

Small, versatile Inertial Measurement Unit

GENERAL DESCRIPTION

The BMI323 is a general purpose, low-power Inertial Measurement Unit (IMU) that combines precise acceleration and angular rate (gyroscopic) measurement with intelligent on-chip motion-triggered interrupt features. The 6-axis IMU comprises a 16-bit triaxial gyroscope, a 16-bit triaxial accelerometer, and a 16-bit digital temperature sensor in a miniature 2.5 x 3.0 x 0.83 mm³ (14-pin) LGA package.

Target applications

- ▶ Device orientation
- ▶ Motion sensing and gesture recognition
- ▶ Fitness tracking
- ▶ Activity and context recognition
- ▶ Stabilization and motion control

BMI323 target devices

- ▶ Notebooks and tablets
- ▶ Wearable devices such as smart watches, sports and fitness devices
- ▶ Game controllers and smart remote controls
- ▶ Toys and gadgets
- ▶ Smart IoT devices

BMI323 targets fast and accurate inertial sensing in all applications. It is an easy-to-use IMU with an integrated feature set.

The sensor features a self-calibrating gyroscope using motionless CRT (component re-trimming) functionality to compensate MEMS typical soldering drifts, ensuring post-soldering sensitivity errors down to $\pm 0.7\%$.

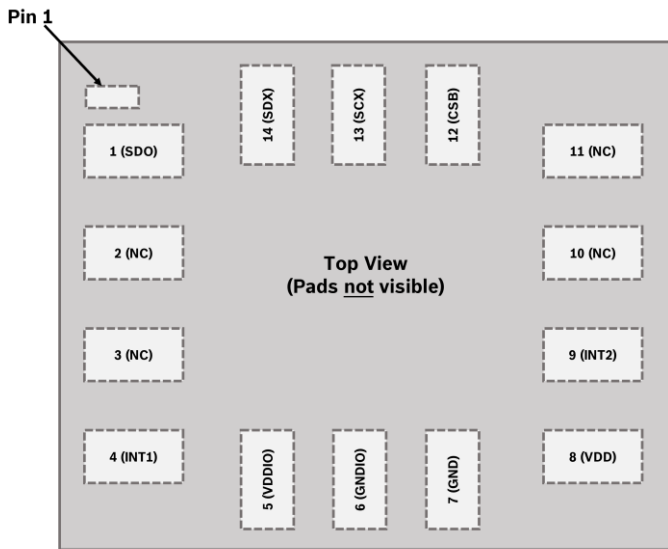

BMI323 includes embedded gesture and activity recognition with an integrated plug-and-play step counter/detector, which is optimized for accurate step counting in wrist-worn devices. The IMU is well-suited for other types of wearable devices, such as hearables or smart fitness trackers and for other mobile devices.

SYSTEM COMPATIBILITY

The BMI323 is designed for best possible fit into modern embedded consumer electronics devices. The sensor has very wide ranges for V_{DD} and V_{DDIO} supply voltages. The performance and the current consumption are stable over the whole voltage supply range. BMI323 provides three digital serial interfaces: I2C, I3C, and SPI.

BMI323 features a 2 kB on-chip FIFO buffer and provides synchronized data. It supports the following features for always-on applications (e.g. activity, action, and gesture recognition) using the IMU ultra-low power domain:

- ▶ motion detection
- ▶ step detector
- ▶ plug 'n' play step counter
- ▶ orientation, flat
- ▶ single tap, double tap, triple tap detection

The embedded feature set can be optimized for wearable, hearable and mobile device context via the sensor API (available via www.bosch-sensortec.com).
